**Date:** 16<sup>th</sup> June 2021

### Focused Government Work Plan to include Top 10 recovery actions to address immediate challenges

---

The Government Work Plan, the States of Guernsey's integrated, phased and funded plan of action for this political term, has been lodged today for debate on 21<sup>st</sup> July 2021.

The Plan puts the work of government into a single document. As agreed by the Assembly in March 2021, it focuses on four priorities: responding to the COVID-19 pandemic, managing the effects of Brexit and meeting international standards, which are both 'must do' priorities; as well as delivering recovery actions and re-shaping government.

The Plan calls for commencing work on a Top 10 list of recovery actions now to address pressing issues:

- **Housing:** scope and deliver urgent measures necessary to address housing pressures;
- **Education:** Commence the reorganisation of secondary and post 16 education;
- **Skills:** set out and resource proposals to grow knowledge and skills in our community;
- **Digital infrastructure:** determine and begin implementation of the approach to enhanced digital infrastructure;
- **Children:** support vulnerable children through revision to Children's Law and action on the Outcomes Report;
- **Population:** assess the fitness for purpose of our population and immigration framework, recognising the need to balance economic needs with maintaining quality of life;
- **Finance and tourism** invest additional funding into promoting Guernsey's finance sector and establish a tourism plan and campaign to expand Guernsey's tourism offer;
- **Regeneration:** establish a development agency and enable work to begin on the development of the seafront masterplan;
- **Transport:** set out a clear and coordinated transport connectivity and infrastructure policy and further develop the general and commercial aviation sector; and

- **Health recovery:** support the physical and mental health recovery of islanders through new occupational health schemes and a pilot mental health centre.

As well as looking at short and medium-term actions, including the Top 10, the Plan also looks to address a trend of underinvestment in the Island's infrastructure, where the States has fallen short of its own capital investment targets.

Deputy Heidi Soulsby, Vice-President of the Policy & Resources Committee said

'The need is great and aspirations are high, but time is short and finances are limited. The Plan focuses on our immediate economic, social and environmental needs while positioning Islanders for a thriving, sustainable future. It takes action and makes real investment in what we need to care for our health; invest in our skills; stimulate our economy; and protect our environment.'

Deputy Mark Helyar, the Treasury lead for the Policy & Resources Committee said

'There has been underinvestment in critical national and economic infrastructure – capital investment is now vital to deliver this Plan. The recommendation, which is affordable in the medium term, is to utilise existing financial assets and borrow a further £200m to invest in our infrastructure, improve our financial resilience and boost economic recovery and expansion.'

The Plan also sets out phased progress in new ways of working to make government more efficient and effective, thereby better enabling the economy, community and environment to thrive. The States' fiscal and human resources will be deployed for maximum impact. The States will deliver only that which they are best placed to carry out and will establish ways to work in partnership with the private and third sectors to more effectively deliver key projects and vital services.

The Government Work Plan's vision was informed by the high-level *Revive and Thrive: Our Recovery Strategy for Guernsey Together* approved last year and will replace the Future Guernsey Plan/P&R Plan.
