

Housing Monitoring Report

First Quarter of 2014 (January-March)

For Information

Introduction

The primary purpose of the quarterly Housing Monitoring Report is to monitor whether a two year supply of housing is being maintained in accordance with Policy HO1 of the Urban Area Plan. In addition other statistics are presented to provide a more in depth analysis of the source and spatial distribution of new dwellings and the take up of planning permissions.

This monitoring report refers to the net change in new dwellings. For example, a scheme to demolish one house and replace it with five flats is counted as +4 dwellings and a scheme to demolish a house and replace it with another house involves no net gain in dwellings and is counted as 0. A dwelling is defined as a self contained unit of accommodation, i.e. where the dwelling is designed for the occupants to share the kitchen, bathrooms and living rooms.

Approvals to date (running totals)

Policy HO1 in the Urban Area Plan requires the Environment Department to ensure that a two-year housing supply is 'effectively available for housing development' at any one time. Given the current annual target of 300 additional new dwellings per year, this equates to 600 new dwellings.

Dwellings are deemed to be effectively available (in the pipeline) where planning permission has been granted but the development is not yet complete, and where the development of new housing is acceptable in principle. The figures below demonstrate the number of dwellings in the pipeline this quarter:

Full permits (work not commenced): 410 dwellings (282 urban / 128 rural)

Outline permissions: 26 dwellings (23 urban / 3 rural)

Under Construction: 343 (253 urban / 90 rural)

Effective Housing Supply: 779 additional dwellings (558 urban, 221 rural) are under construction or have some form of permission, representing an increase in the 2 years' housing supply from the previous quarter. The current housing supply represents a 72/28% split between the supply arising from urban and rural areas, respectively.

There are currently 4 extant outline planning permissions: one for 19 dwellings at Channel Island Tyres on La Charroterie, St. Peter Port; one for 4 dwellings at Admiral Park, St Peter Port; a third for a replacement dwelling in St Martin's, and; lastly, a development for three dwellings at Rue de la Cort, St Martin's.

44% of the pipeline is under construction. This is in comparison to 41% in quarter 1 of 2013. Comparison with other jurisdictions in this respect is not always easy due to different ways in which data is collected and the frequency at which it is reported. However a number of other local authorities also monitor the percentage of their pipeline under construction and some of these figures are shown below.

Jersey	January 2012	26%
Chiltern District Council	March 2013	30%
North Norfolk	March 2013	39%

The Parishes

The status of new housing development in the pipeline in each parish is illustrated below. The figures represent a running total and not just the permissions granted during the quarter.

Parish	Dwellings upon which work has not yet started		Units under construction (c)	Total Units (a) + (c) "Pipeline figure"
	All types incl. outline permissions (a)	Permits alone (PMT+COU) (b)		
St Peter Port	285	262	212	497
St Sampson's	32	32	25	57
Vale	32	32	39	71
Câtel	14	14	32	46
St Martin's	50	47	19	69
St Saviour's	10	10	1	11
Forest	4	4	5	9
Torteval	0	0	2	2
St Andrew's	5	5	0	5
St Peter's	4	4	8	12
TOTAL	436	410	343	779

Figure 1: Planning permissions for new dwellings by Parish

First Quarter Statistics 2014

Approvals this quarter

Full planning permission was granted for a total of 68 additional dwellings during the first quarter of 2014. During that quarter, outline permission was granted for 3 dwellings, bringing the total number of dwellings approved to 71. This represents a split of 25 [35%] in the urban area and 46 [65%] in the rural area. This unusually high percentage for the rural area is due to the largest permission for the quarter arising on a site in St. Martins. Permission was granted for 35 dwellings at St Martin's Hotel, Les Merriennes, St Martin's.

The average number of dwellings approved per quarter over the past 3 years was 80 units. Therefore this quarter's approvals are below average. One unit was lost through conversion of a flat to an office at La Tonnelle House, Les Banques, St Sampson's. No net increase in dwellings occurred through redevelopment during this quarter, each approval being for replacement on a one-for one basis. This runs contrary to the past three years where the average was 42 dwellings approved through redevelopment type proposals.

The sources of dwellings arising from this quarter's permissions are as follows:

	Urban area	Rural area	Total
New build	8	0	8
Re-development	0	0	0
Sub-division	1	2	3
Conversion	17	44	61
Loss of units	-1	0	-1
Total	25	46	71

Figure 2: Full planning permissions for new dwellings given this quarter by area and source

Brownfield / Greenfield development

The Urban Area Plan and Rural Area Plan only allow the development of greenfield sites in exceptional circumstances, therefore approvals on greenfield sites are closely monitored.

0 dwellings were permitted on greenfield sites this quarter.

Appeal decisions

For completeness, from 2014 the number of dwellings permitted through applications allowed following appeal decisions have been incorporated.

0 dwellings were permitted through appeal this quarter

Lapsed permissions

During the first quarter of 2014 nine full permissions lapsed without being taken up for development. This equates to a total of 9 dwellings with a split of 8 [89%] in the urban area and 1 [11%] in the rural area. 100% of the lapsed permissions were full permits.

Figure 3 shows that the majority of lapsed permissions were for conversion of buildings into residential use.

	Permissions	Permissions %	Dwellings	Dwellings %
Conversion	4	45	6	67
New Build	2	22	3	33
Redevelopment	3	33	0	0
Subdivision	0	0	0	0
Loss of units	0	0	0	0
Total	9	100	9	100

Long Term Trends

Urban/Rural development

Whilst the Urban Area Plan makes provision for 90% of the housing requirement to come forward in the urban area, this is not to be interpreted as a target. However, it is useful to monitor the balance of provision between the urban and rural areas. The percentage of dwellings approved in the urban area is recorded below. It is noticeable that since 2000 the proportion of new dwellings within the urban area is higher than the preceding 8 years. 2010 is an anomaly due to the number of dwellings demolished at the Bouet, St. Peter Port.

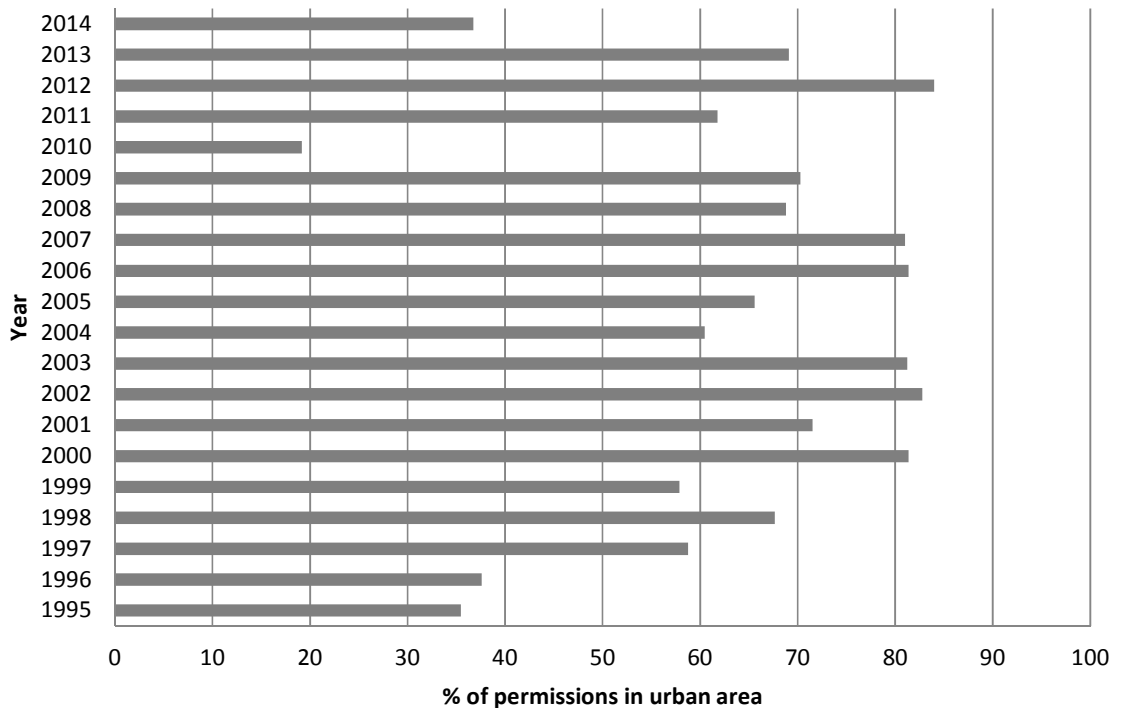

Figure 4: Percentage of planning permissions for new dwellings given in the urban area

Take up of permissions and completions

Whilst the housing supply requirement in the UAP relates only to the number of permissions granted, it is also useful to monitor how many of these permissions get built (are taken up) and the rate of take up over the 3 year life of permissions. As well as some permissions not being taken up, there is also a delay between planning permissions being granted and ability to put a spade in the ground due to the requirement for other consents, completing negotiations or legal drafting or simply awaiting the availability of a builder. Monitoring this rate of take up trend informs the nature of pipeline supply and how many dwellings this is likely to result in on the ground. This information is available for a 22 year period, but for ease of presentation only information since 1996 is shown in Figure 5. It shows that after 1 year of being granted planning permission approximately a third of permissions for residential development are taken up, after 2 years approximately half of permissions are taken up and after 3 years over three quarters of permissions are taken up.

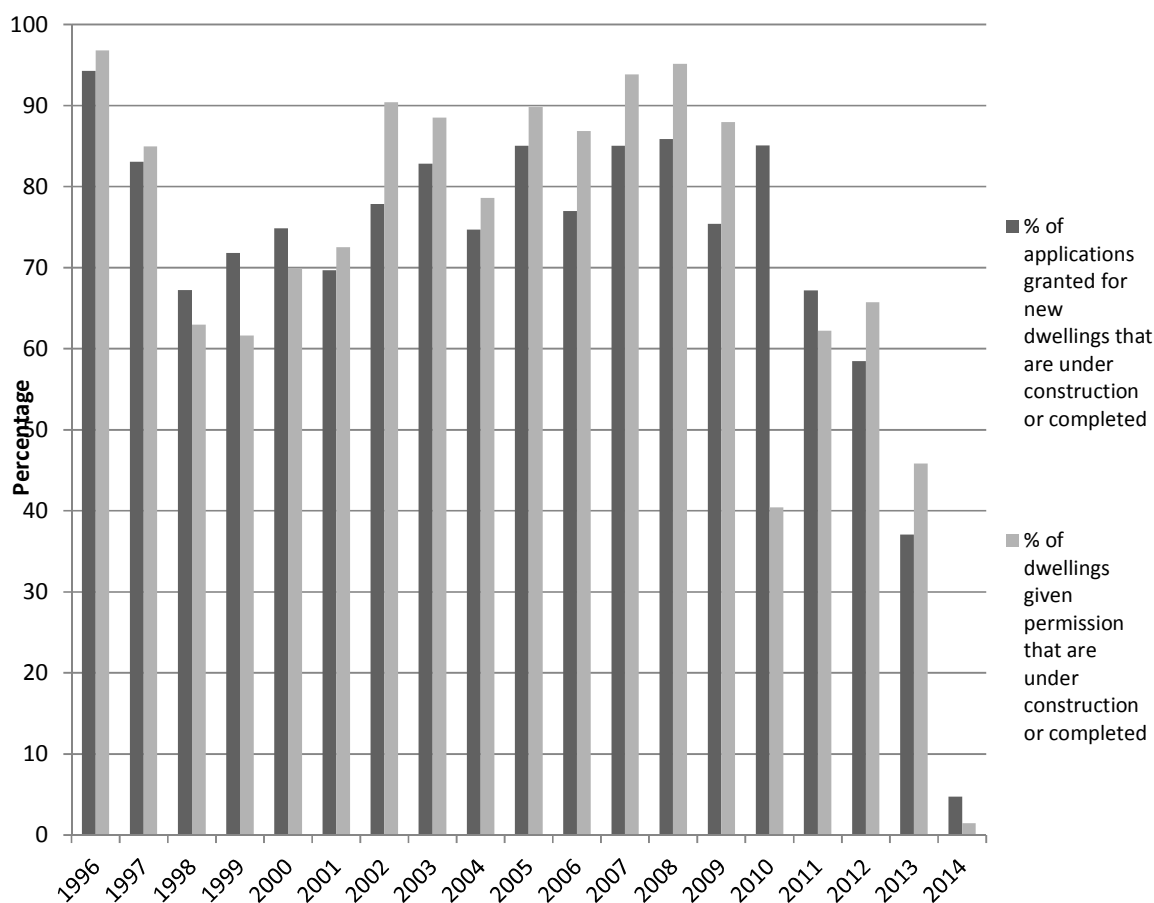

Figure 5: Monitoring what proportion of dwellings permitted get built

Figure 6 sets out the number of dwellings that were approved in the given year (column 2) and how many of those have been constructed or are under construction (column 3) (i.e. it does not relate to the year in which they were built). Column 4 sets out the percentage of dwellings that have been built as a proportion of the total number of dwellings granted permission. For example, of the 249 additional dwellings given permission in 2009, 219 of those are under construction or have been constructed. Because developers are given 3 years in which to start development once planning permission has been granted, the figures for 2011 onwards are the totals to date.

Year	No. of dwellings approved in the given year	No of dwellings constructed or under construction from the applications granted in the given year	% dwellings take up as a proportion of the total no. of dwellings granted permission
2005	157	141	90
2006	258	224	87
2007	195	184	94
2008	186	177	95
2009	249	219	88
2010	97*	38*	39
2011	214	140	62
2012	368	230	66
2013	305	138	46
2014	68	1	1
10 yr total	2097	1492	71

Figure 6: Proportion of dwellings given planning permission that get built

*The low figure is explained by permission being granted for demolition of the Bouet in 2010 and permission being given for the redevelopment of the Bouet in 2011.

It is also of interest to note the proportion of planning permissions for new residential development which are implemented. This is set out in the table below. Again, because developers are given 3 years in which to start development once planning permission has been granted, the figures for 2011 onwards are the totals to date.

Year	No. of planning permissions involving new dwellings	No. of planning permissions that have been implemented from the permissions given in that year	% applications granted for new dwellings that have been implemented
2005	127	108	85
2006	126	97	77
2007	87	75	86
2008	99	85	86
2009	126	94	75
2010	118	97	85
2011	122	82	67
2012	120	69	58
2013	126	46	37
2014	21	1	5
10 yr total	1072	754	70

Figure 7: Proportion of planning applications consented for dwellings that get implemented

Lapsed permissions

As occurs elsewhere, a small percentage of permissions never come to fruition. This can be for a variety of reasons, such as difficulty accessing finance, a change in the market or as is often the case mainly due to the permissions being superseded by newer slightly different applications for the same site.

Monitoring of this information commenced in 2014. It is the intention to begin to display this information in table and chart form once an adequate number of entries have been collated.

Total for 2014										

- Please note that the number in the 'Total for 200X' row (from 2010-2012) is smaller than the apparent aggregate for that year. This is because the 'Total' figure weeds out duplicate applications approved for any one scheme during that year. It is not uncommon for several permissions to be issued for a single scheme as plans are amended either before or during construction. A change in methodology negates this from 2013 onward.

■ Full Permits (work not started)

■ Outline Permissions

■ Units Under Construction

The graph gives a 'snapshot' of the status of housing land availability at the end of each quarter. The numbers are not cumulative.
